

Read & Publish Open Access initiative

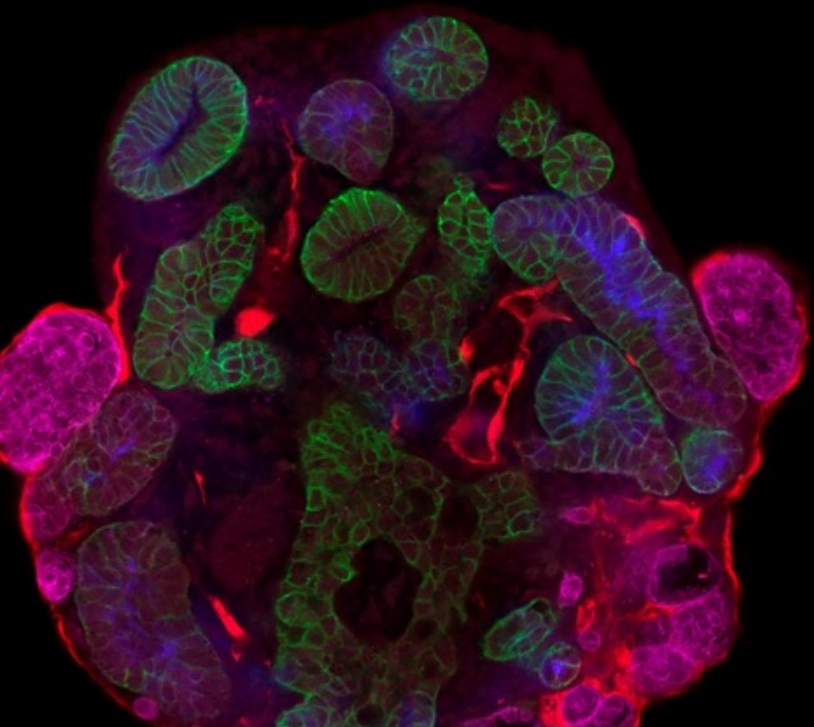

About The Company of Biologists

We are a not-for-profit publishing organisation dedicated to supporting and inspiring the biological community.

We publish three prestigious subscription journals:

About our Read & Publish Open Access initiative

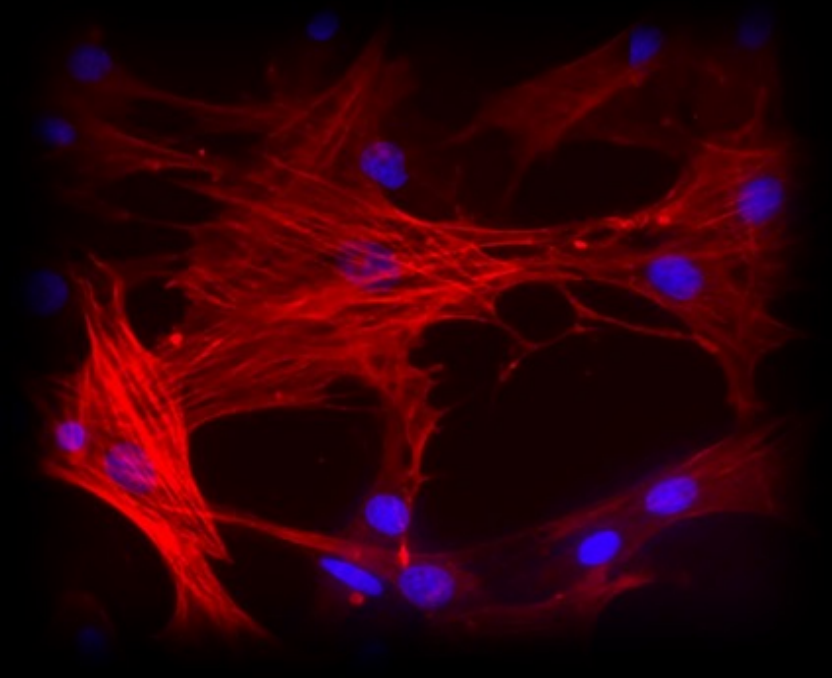

- Our Open Access journey started over 16 years ago, and we were one of the first not-for-profit publishers to offer Read & Publish agreements to libraries and library consortia.
- Read & Publish agreements offer libraries a cost-neutral transition to Open Access.
- Read & Publish agreements offer researchers enhanced opportunities to read and publish articles in our leading, peer-reviewed subscription journals.
- We have signed Read & Publish and other transformative Open Access agreements with library consortia (EIFL, IReL, Jisc, MALMAD, Max Planck Digital Library and the University of California), as well as agreements with individual libraries.

How is Read & Publish pricing calculated?

Why participate in our Read & Publish initiative?

- Free and uncapped Open Access publishing for corresponding authors under CC-BY licence terms.
- Unlimited “read” access to all our subscription journals, with perpetual access to content dating back to 1853.
- Supports institutions and researchers working to comply with Plan S and funder mandates.
- Cost-neutral transition to Open Access, with transparent pricing.
- Ease of administration - single fee covers “read” and “publish” so no separate article processing charges (APC).
- Automatic identification of corresponding authors.
- Enhanced reporting and Open Access workflow.

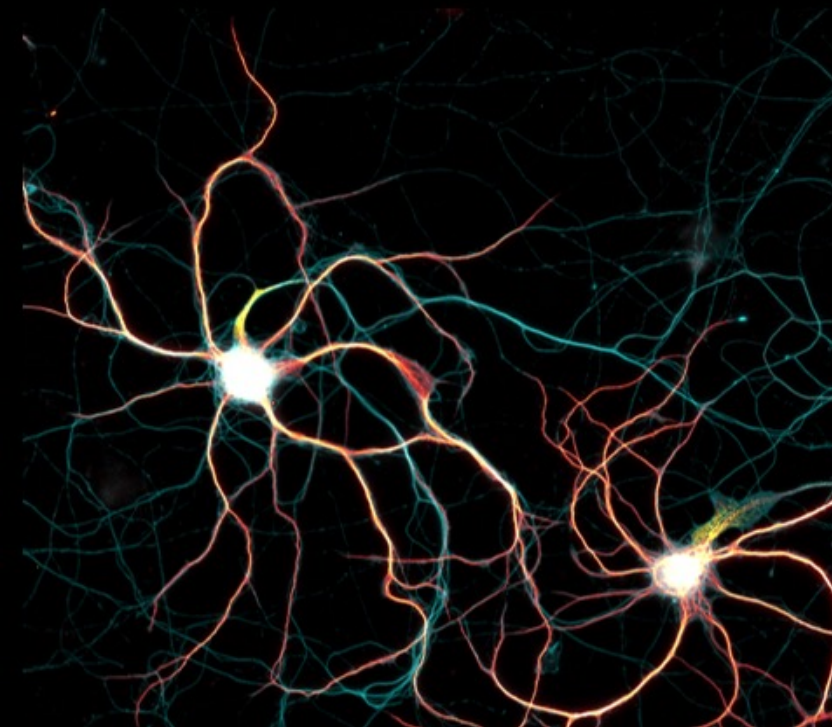

Matthew Freeman

Chairman,
The Company of Biologists
& Head,
Dunn School of Pathology,
University of Oxford

“The Company of Biologists is committed to sustainable Open Access publishing in the long term.

Read & Publish agreements are an important step in our Open Access journey, and we hope that you will join us.”
